1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Jean-Pierre L. R. Harivel, Kelm et al. and Spillman et al. all disclose various wound battery cells of interest while JP-2003-303624 teaches a wound battery including a portion of a separator that is folded on itself in a portion of the wound cell.

2. The following is an examiner's statement of reasons for allowance: none of the prior art of record teach either the battery or the method of making such a battery wherein the battery includes a first electrode having an uncoated and coated portion on a current collector, a second electrode having an uncoated and coated portion on a current collector and a separator interposed between the two electrodes where the separator is folded at least two times between uncoated portions of both the first electrode and the second electrode. The art does not disclose such an arrangement of the separator between two electrodes in an electrode unit or in a battery. The closest art, JP-2003-303624, does not disclose the dual folds in the separator nor the folded separator located between uncoated portions of both electrodes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Maples whose telephone number is 571-272-1287. The examiner can normally be reached on Monday-Thursday from 6:15-3:45.
